

Decentralised Freelancing Work Decentralised.

Secure, transparent, and trustless collaboration powered by Smart Contracts.

Hire a Service

Post jobs, fund escrow, and receive deliverables — all on-chain.

Offer a Service

List your skills, accept contracts, and get paid automatically.

Platform Entry Point

Connect your MetaMask wallet to authenticate and access the full decentralised marketplace. No sign-ups. No intermediaries. Just smart contracts.

  MetaMask integration required to post, bid, and execute contracts on the platform.

Update CV

PLATFORM ARCHITECTURE

Freelancer UI & Professional Identity

This slide showcases the architectural decision to separate Client and Freelancer pages, and highlights how the Freelancer UI manages professional identity and CV metadata on-chain. The dedicated workflow covers building a professional profile, uploading a CV, and securely linking a Document CID (IPFS) to the blockchain.

*Dashboard screenshot placeholder — insert the "My CV" and "My Professional Profile" view (16:9). Add callouts around the **Document CID** input and **Update CV** button.*

TECHNICAL
DEMO

On-Chain Service Listing

When a freelancer submits a service, the frontend calls the smart contract via MetaMask. The transaction pushes metadata on-chain and emits a ServiceListed event for indexing.

Transaction Flow

1. Freelancer fills in title, category, and ETH price
2. Frontend calls `listService()` via MetaMask
3. Hardhat Local node signs and broadcasts the transaction
4. Contract stores metadata and emits `ServiceListed`
5. Dashboard updates from the on-chain event log

Client Ecosystem: Discover & Hire

The platform's true multi-user architecture is demonstrated by logging into a second wallet — **Account 2** — to switch into Client Mode. This transition unlocks the decentralized marketplace, where clients browse, search, and hire freelance services.

Marketplace Features

- **Browse** the "Offered Services" feed of active freelancer listings
- **Search** by freelancer ID or keywords to find specific expertise
- **Sort** by newest arrivals or highest-rated providers

📄 **Switched to Account 2** — Client Mode is now active. The marketplace feed is fully accessible.

Smart Contract Escrow

A single **Hire** action triggers an on-chain transaction — locking the agreed ETH into a tamper-proof escrow, guaranteeing secure, trustless collaboration.

01

Click Hire

Initiates the contract call

03

ETH Locked

Funds secured in escrow

02

MetaMask Prompt

Review and sign the transaction

04

Escrow Active

Collaboration begins, trustlessly

Step 1 — MetaMask Confirmation

The wallet prompt surfaces contract address, ETH amount, and gas — requiring explicit user approval before any funds move.

Step 2 — Escrow Funded

On confirmation, the UI updates to reflect the active escrow state — showing locked amount and hire status.

Trustless by design: Funds remain locked in the contract until predefined release conditions are met — no manual intervention, no counterparty risk.

Job Completion & Decentralized Rating

Once a job is marked complete, the smart contract automatically releases escrowed funds — no manual intervention required. The client then submits a **1-to-5 star on-chain rating**, permanently recorded on the blockchain for full transparency and trust.

🔒 Escrow Release

Smart contract triggers fund release upon job completion confirmation

★ On-Chain Rating

Immutable 1–5 star review recorded transparently on the blockchain

Security Audit & Fraud Prevention

Every client wallet is audited on-chain before engagement. The **Fraud Client Check** surfaces risk signals — completed jobs, escrow history, and a calculated **Risk Percentage** — so freelancers decide with full transparency.

What the Audit Reveals

Completed Jobs

On-chain job history verifies real engagement.

Escrowed Amounts

Volume and patterns reveal financial behavior.

Risk Percentage

Composite score from wallet signals. Low = safe; high = caution.

Community Flagging

Freelancers flag bad actors, building a shared trust layer.

14% Risk — a low score signals a trustworthy client. Always review flagged activity before accepting.

System Evolution: Top 10 Improvements

A comprehensive summary of the technical, functional, and UX upgrades delivered in the final iteration of the dApp.

→ Separate Client & Freelancer UI

Dedicated pages and interfaces tailored to each user role.

→ Fraud Audit & Account Flagging

Automated audit system to detect and flag suspicious client accounts.

→ Comprehensive Services List

Full catalogue of services available for clients to browse and select.

→ Service Search

Search functionality enabling clients to quickly find relevant services.

→ Integrated CV Section

Built-in CV display allowing freelancers to showcase credentials directly.

→ Expanded Account Details

Richer profile information with comprehensive user account data.

→ Service Sorting

Sort services by rating or newest listings for better discoverability.

→ Enhanced Frontend Design

Significantly improved UI with modern aesthetics and refined visual hierarchy.

→ Unified Service History

Single consolidated view of all hired and offered services per user.

→ Freelancer Service Unlisting

Freelancers can unlist inactive services, keeping the marketplace clean and relevant.
